This is what awaits you in the Funky Forest Family

Urban, yet natural. Innovative, yet loveable. Domestic, yet exotic.

In 2018, having gained decades of experience in catering, we envisaged a family of innovative fruit juice products. In 2020, the construction of our manufacturing plant in Szécsény was completed. When setting up our company it was an important aspect to get the raw materials from domestic sources as well as to build our plant in a disadvantaged area retaining the skilled local workforce.

We make the most of the gifts of nature!

We process our products by applying a gentle heat treatment. We, then, cool the products under controlled conditions to ensure that as many valuable compounds as possible are retained. Our pasteurised, bottled and unopened products stored at room temperature can be consumed for up to a year.

Responsibility. Sustainability. Being Funky.

We develop our products using environmentally friendly technology. The products contain only fruits and vegetables. We fill our juices into eco-friendly glass bottles, the energy demand of our plant and the cold store is mostly provided by solar panels. To support the production in Szécsény, a 600 m² cold store is connected to the main manufacturing plant which is nearly 700 m². Thus, the continuous raw material supply is ensured throughout the year.

As Funky mission is about an adventure you haven't experienced before, we keep creating unique combos based on the most popular fruit flavours. We use excellent quality apple juice as a primary ingredient in our press juices and smoothies. None of our products contain added sugar.
